PARKER

Leader in process filtration, separation and purification

Parker microfiltration products set the highest standards for filtrate quality, product reliability and cost-effective use. Parker products provide optimal solutions for food and beverage applications. Parker products are available in lengths from 4 to 40 inches and configurations to retrofit all commonly installed filter housings. Products are offered in membrane and depth media with a full range of cartridges, mini-cartridges and capsules to meet production-, pilot- and laboratory-scale requirements. Removal ratings from 0.02 to >800 µm are available. All Parker products are backed by in-depth Technical Support, fast order turnaround and factory-trained local Distributors.

APPLICATIONS

Parker food and beverage products are optimized for filtration:

- Wine
- Beer
- Bottled Water
- New Age Beverages
- Distilled Spirits
- Cultured Food Products
- Sweeteners
- Flavors and Colors
- Product Makeup and Rinse Water
- Carbonation
- Bacteria Removal
- Prefiltration
- Venting
- Steam Filtration
- Gel Removal
- Haze Removal
- Sediment Removal
- Clarification
- Sterile Filtration

QUALITY MANAGEMENT AND ISO 9001

Quality is of paramount importance to Parker. All products are manufactured under controlled environmental conditions and are subjected to demanding programs of quality assurance.

Parker is ISO 9001 Certified.

MICROFILTRATION:

A Core expertise

The Food and Beverage industry is a rapidly growing world market that draws upon core areas of our filtration expertise. Included within this market the broad range of products that require highly effective filtration in their manufacturing processes.

These products include:

- Water Filtration
- Air/Gas Filtration
- Steam Filtration
- Liquid Filtration
- Filter housings
- Mini sized cartridges and capsules

Through our Technical, R&D and Customer Service Teams we offer a wide range of services to ensure total customer satisfaction.

TECHNICAL CAPABILITIES

Our Technical Support Services team is dedicated to the needs of the Food and Beverage industry. We have an extensive range of state-of-the art analytical instrumentation and a highly qualified team of scientists and engineers generating innovative solutions to a wide variety of filtration needs. We strive to optimize our customers' filtration applications by offering full technical support that includes:

- process failure analyses
- contamination analyses
- process and cost improvement audits
- on-site testing services

RESEARCH AND DEVELOPMENT

Our R&D teams are constantly working to innovate new products and discover technologies that will enhance the performance of process filtration, and thus keep us at the forefront of process filtration technology.

CUSTOMER SERVICE

An experienced team of professionals dedicated to respond quickly and comprehensively to orders – both for standard and customized products – and ensure their on-time delivery worldwide.

MICROFILTRATION PRODUCTS

Tailored to food and beverage applications

Filtration applications:

- Wine
- Beer
- Bottled Water
- Distilled Spirits
- Cultured food products
- Sweeteners
- Flavors and Colors
- Product Makeup Water
- Rinse Water
- Carbonation
- Bacteria Removal
- Prefiltration
- Venting
- Steam Filtration
- Gel removal
- Haze removal
- Sediment removal
- Clarification
- Sterile Filtration

Parker microfiltration products set the highest standards for filtrate quality, product reliability and cost-effective use. Parker products are available to provide optimal solutions for food and beverage applications. Parker products are available in lengths from 4 to 40 inches and configurations to retrofit all commonly installed filter housings. Products are offered in membrane and depth media with a full range of cartridges, mini-cartridges and capsules to meet production-, pilot- and laboratory-scale requirements. Removal ratings from 0.02 to >800 μm are available.

All Parker products are backed by in-depth Technical Support, fast order turnaround and factory-trained local Distributors.

Integrity tester and a wide variety of Filter Housings are available.

ENGINEERING YOUR SUCCESS.

CLEARFLOW™

Serial layers of depth media and membrane provide long lasting protection of final filters

Extended life and high retention efficiency make Clearflow™ an ideal filter for the clarification of particulate-laden solutions as commonly found in food and beverage production.

At the heart of the Clearflow™ design is a serial layer matrix of depth media and polyethersulfone (PES) membrane. This combination offers superior flow and long-lasting protection for downstream final filters. Clearflow™ cartridges are also non-fiber-releasing and will not unload contaminants, even under pulsing conditions.

Clearflow™ cartridges are available in 0.2, 0.5, or 0.8 µm nominal ratings, and with your choice of glass fiber or polypropylene prefiltration media. They are manufactured in a certified cleanroom environment. The Biological Grade version provides qualitative microbial retention. General Grade cartridges are for prefiltration applications, and are bulk packaged and economically priced.

BENEFITS

- Excellent particle retention provides for excellent protection of downstream filters
- High flow rate reduces processing time
- Long service life minimizes changeout frequency
- Integrity testable
- Steam Sterilizable

APPLICATIONS

Prefiltration/clarification of:

- Syrups
- Sweeteners
- Wine/beer/bottled water
- Viscous liquids

SPECIFICATIONS

Materials of Construction:

Either glass fiber or polypropylene depth media over with a PES membrane layer. Media support layers and cartridge structure are polypropylene.

All components meet USP-XXIV Class VI-121°C criteria and are thermally bonded to assure integrity and purity.

Maximum Operating Conditions:

Forward	60 psid (4.1 bar) @ 75°F (24°C)
Reverse	30 psid (2.0 bar) @ 75°F (24°C)

Steam Sterilizable and Sanitizable:

Cartridges can be steamed or autoclaved for at least 10 one-hour cycles @ 121°C (250°F). Cartridges can also be hot water or chemically sanitized in place using common sanitizing agents. Please contact Parker for detailed procedures.

Integrity Tested:

All biological grade elements are integrity tested by a diffusive flow method during manufacturing

Integrity Test Values:

FILTER RATING	BUBBLE POINT*		flow (ml/min)	DIFFUSIONAL FLOW*	
				TEST PRESSURE	
µm	psig	bar		psig	bar
0.2	30	21.	20	24	1.7
0.5	17	1.2	20	13	0.9
0.8	14	1.0	20	11	0.7

*Tested in deionized water

CLEARFLOW™

Serial layers of depth media and membrane provide long lasting protection of final filters

PERFORMANCE ATTRIBUTES

Typical Water Flow Rates*

SG- with glass fiber depth matrix

0.2 µm 4.0 gpm/psid (21.96 lpm/100 mbar)

0.5 µm 7.5 gpm/psid (41.18 lpm/100 mbar)

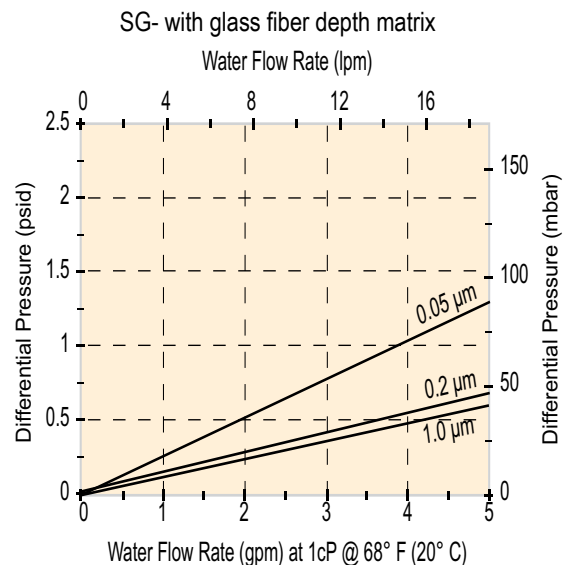

0.8 µm 8.5 gpm/psid (46.67 lpm/100 mbar)

SP- with Polypro fiber depth matrix

0.2 µm 2.0 gpm/psid (10.98 lpm/100 mbar)

0.5 µm 3.1 gpm/psid (17.02 lpm/100 mbar)

* For fluids with viscosity of 1cP, per 10 inch (250 mm) cartridge equivalent

CLARIFLOW® GENERAL GRADE

Hydrophilic polyethersulfone (PeS) membrane for aqueous liquid filtration applications

Clariflow® General Grade cartridges are designed for general purpose use in the filtration of high-purity liquids and aqueous chemicals.

The mirrored-anisotropic Polyethersulfone (PES) membrane is inherently hydrophilic and has a pore morphology that delivers exceptionally high flow rates.

Because there are no added surfactants or wetting agents, and the support layers and structure are all-polypropylene, the filter exhibits low extractables, broad chemical compatibility and good resistance to hydrolysis.

BENEFITS

- Absolute Rated Membrane
- High flow rate reduces processing time
- Broad chemical compatibility allows use in most applications
- Low differential pressure reduces system wear and tear

APPLICATIONS

- Beverage clarification
- Ingredients and Process liquids
- Water filtration
- Deionized water systems

SPECIFICATIONS

Materials of Construction:

Membrane	Polyethersulfone
Support layers	Polypropylene
Structure	Polypropylene

Maximum Differential Pressure/Temperature:

Forward	80 psid (5.5 bar) @ 75°F (24°C)
	40 psid (2.8 bar) @ 180°F (82°C)
Reverse	50 psid (3.4 bar) @ 75°F (24°C)

Effective Filtration Area:

6.8 ft² (0.63 m²) per 10 inch (250 mm) cartridge

Bulk Packaging:

Bulk packaged in case quantities to reduce material disposal.

- 10" - 28 per carton
- 20" - 12 per carton
- 30" - 12 per carton
- 40" - 9 per carton

CLARIFLOW® WATER SERVICE GRADE

Hydrophilic polyethersulfone (PeS) membrane for cost-effective purification

Clariflow® Water Service Grade cartridges are cost-effective alternatives to Clariflow E and G Grade cartridges for the filtration of a variety of aqueous liquids.

The Water Service cartridge is built around a unique polyethersulfone (PES) membrane that is inherently hydrophilic, and contains no added surfactants or wetting agents. It delivers clean filtrates, flow rates, extended service life and excellent resistance to hydrolysis.

Water Service cartridges are fabricated under cleanroom conditions.

BENEFITS

- Absolute rated membrane
- Reliable and cost-effective
- Broad chemical compatibility allows use in aqueous applications
- Resistance to hydrolysis allows extended use in UPW systems
- High flow rate/low differential pressure reduces system wear and tear

APPLICATIONS

- Deionized water filtration
- Liquid clarification
- Recirculating liquids
- Wine and beer clarification
- Juices
- Bottled water
- Process water

CLARIFLOW® WINE

Pleated polyethersulfone (PeS) membrane for final filtration of wine and beverages

Extended life and absolute retention efficiency make the Clariflow® Wine product an ideal filter for the clarification of wine. At the heart of this design is a special membrane composed of polyethersulfone (PES). Choosing either the 0.65 or 0.45 µm pore sizes for red and white wines, PES membrane offers superior flow, extended on-stream life, and the consistent removal of microorganisms and particulates.

Clariflow® Wine cartridges are inherently hydrophilic, and contain no added surfactants or wetting agents. The PES membrane also exhibits low color-binding characteristics. Ensures that the filter will not affect the taste of the wine being processed. Each cartridge is manufactured in a certified clean-room environment in accordance with a quality system consistent with the requirements of ISO 9001 certification and guidelines.

BENEFITS

- Extended on-stream life minimizes changeout frequency
- High retention efficiency of yeast and other wine spoilage organisms
- Steam sterilizable/sanitizable for cleaning and reuse
- Integrity testable to ensure complete reliability

APPLICATIONS

Prefiltration/Clarification of:

- Wine
- Beer
- Spirits
- Mineral water

SPECIFICATIONS

Materials of Construction:

Membrane	Polyethersulfone
Support Layers	Polypropylene
Structure	Polypropylene

Operating Differential Pressure:

Forward	80 psid (5.4 bar) @ 75°F (24°C)
	40 psid (2.8 bar) @ 180°F (82°C)
Reverse	50 psid (3.4 bar) @ 75°F (24°C)

Steam Sterilizable and Santizable:

Cartridges may be steamed or autoclaved for at least 50 one-hour cycles @ 135°C (275°F). Cartridges may also be hot water and chemically sanitized in place using common sanitizing agents.

Bacteria Retention:

0.65 µm cartridges have been tested to retain *S. cerevisiae* and *P. damnosus*, 0.45 µm cartridges have been tested to retain *L. oenii* and *L. brevis* under conditions typical of those found in the wine industry.

Integrity Test Values: (per 10" cartridges)

PROFLOW™ II ABR

Pleated PTFE membrane cartridge for sterile venting and gas delivery

The Proflow™ II Aerosol Bacterial Retentive (ABR) cartridge (0.2 μm) is validated to produce sterile air utilizing a bacterial aerosol challenge (See the Validation Guide for the test protocol). This methodology best emulates the actual bacterial removal action of the filter in use as a hydrophobic vent. Proflow™ II ABR exhibits some of the highest air flow rates for sterilizing grade air filters built of pleated expanded PTFE membrane. Users who require the ultimate in flow rate for tank venting and sterile air supply will find the Proflow™ II ABR to be their filter of choice.

This cartridge is fabricated, 100% integrity tested, and packaged utilizing a certified cleanroom to guarantee consistent performance and quality.

BENEFITS

- Fully validated for sterilizing-grade performance
- Broad chemical compatibility allows use in most applications
- Long service life minimizes changeout frequency
- Low differential pressure reduces energy costs
- Integrity tested to ensure quality

APPLICATIONS

- Fermenter
- Formulation tank
- RO and WFI storage tank
- Starter culture vessels
- Air Supply
 - Fermentor air
 - Container purge air
 - Aseptic packaging air

SPECIFICATIONS

Materials of Construction:

Membrane	PTFE
Support layers	Polypropylene
Structure	Polypropylene

All components meet USP XXIII class VI -121°C criteria and are thermally bonded to assure integrity.

Maximum Differential Pressure:

Forward	80 psid (5.5 bar) @ 75°F (24°C)
	40 psid (2.8 bar) @ 180°F (82°C)
Reverse	50 psid (3.4 bar) @ 75°F (24°C)

Effective Filtration Area:

10-inch (250 mm) cartridges	9.3 ft ² (0.86 m ²)
5-inch (127 mm) cartridges	4.6 ft ² (0.43 m ²)

Bacterial Retention:

Proflow™ II ABR 0.2 μm will provide a sterile effluent when challenged with up to 10⁷/cm² CFU of *Brevundimonas diminuta* per element using an Aerosolized Bacteria Challenge. The 0.2 μm version has also been shown to be > 99.99 percent efficient for the removal of phiX-174 bacteriophage virus when challenged with at least 10⁸ virus/10" length. In both cases cartridges were challenged after 100 one-hour steam cycles at 145°C.

Steam and Sterilization:

Cartridges have been validated to withstand over 100 one-hour steam cycles at 145°C

Integrity Test Values:

(in 60/90 IPA/water) Flow per 10" cartridge

PROFLOW® II ABR MINI-CARTRIDGES

Pleated PTFe membrane cartridge for sterile venting and gas delivery

Proflow® II Aerosol Bacterial Retentive (ABR) mini-cartridges are validated to produce sterile air for tank venting and air supply applications. These filters exhibit some of the highest air flow rates of any mini-cartridges of, and are offered in a choice of three sizes to meet specific gas delivery requirements.

Proflow II mini-cartridges provide a secure seal and available with a choice of material to fulfill a range of application demands.

BENEFITS

- High air flow rates for effective venting
- Qualitative retention of aerosolized bacteria offers high titre reduction
- Long service life minimizes changeout frequency
- 100% integrity tested for reliable product performance
- End fittings provide a secure O-ring seal (-116) that is available with a number of material choices

APPLICATIONS

Sterile Venting

- Bioreactors/Fermenters
- Formulation tanks
- RO water storage tanks
- Finished product liquid tanks

Sterile Air/Gas Feed

- Aseptic packaging
- Sparging

SPECIFICATIONS

Materials of Construction:

Membrane	PTFE
Support Layers	Polypropylene
Structure	Polypropylene

All components meet current USP criteria, and are thermally bonded to assure integrity.

Maximum Operating Differential Pressure:

Forward	70 psid (4.8 bar) @ 75°F (24°C)
	35 psid (2.4 bar) @ 140°F (60°C)
	20 psid (1.4 bar) @ 167°F (75°C)
Reverse	30 psid (2.1 bar) @ 75°F (24°C)

Bacteria Retention:

Proflow® II ABR mini-cartridges will provide a sterile effluent when challenged with up to $10^7/\text{cm}^2$ CFU of *Brevundimonas diminuta* per filter using an Aerosolized Bacteria Challenge methodology.

Autoclavable and Sanitizable:

Mini-cartridges can be autoclaved up to 50 times (60 minutes) at 275°F (135°C), or chemically sanitized in place using common sanitizing agents.

Integrity Test Values:

PROFLOW™ II ABR MINI-CAPSULES

Pleated PTFE membrane capsules for sterile venting & gas delivery

Proflow® II Aerosol Bacterial Retentive (ABR) capsules are validated to produce sterile air for tank venting and air supply applications. These capsules exhibit some of the highest air flow rates of any sterilizing-grade filters, and are offered in a choice of three sizes to meet specific gas delivery requirements.

The encapsulated design maximizes efficiency by providing faster, easier changeout without laborious cleaning procedures. Eliminating the need to open reusable housings minimizes the chance of introducing contamination into the process.

BENEFITS

- High air flow rates for effective venting
- 100% integrity tested for reliable product performance
- Wide variety of filter sizes and fittings to meet most system requirements
- Custom ordering option allows different inlet/outlet fittings for specific needs
- Improved vent design eliminates the risk of vent caps breaking free under pressure

APPLICATIONS

- | | |
|--------------------------|-----------------------------|
| Sterile Venting | Sterile Air/Gas Feed |
| • Bioreactors/fermenters | • Aseptic packaging |
| • Formulation tanks | • Head space blanketing |

FULFLO® II CRYPTO PES

Pleated PeS cartridges for cryptosporidium removal from water

Fulflo II Crypto PES utilizes the unique properties of a microbially retentive polyethersulfone membrane that provides absolute retention of *Cryptosporidium parvum* oocysts to meet the specific needs of the food and beverage and potable water industries.

The PES membrane has an asymmetrical pore structure with a high voids volume which offers unrivalled retention capacity, higher throughputs and higher flow rates than conventional membranes.

The microporous membrane is inherently hydrophilic and can be repeatedly integrity tested, providing a valuable quality assurance tool that fits well into a HACCP framework.

BENEFITS

- Specifically developed for the removal of *Cryptosporidium parvum* oocysts
- 1.0-micron absolute-rated polyethersulfone (PES) membrane
- High throughputs and flow rates
- Integrity testable
- Can be repeatedly steam sterilized or chemically sanitized
- 100% retention of *cryptosporidium* oocysts

APPLICATIONS

- Potable water
- Foods requiring *Cryptosporidium* removal
- Beverages requiring *Cryptosporidium* removal

SPECIFICATIONS

Materials of Construction:

Filtration Membrane	Polyethersulfone
Prefilter Support and Layer	Polyester
Outer Protection Cage	Polypropylene

Recommended Operating Conditions:

Up to 158°F (70°C) continuous operating temperature and higher short-term temperatures during CIP to the following limits: Capsules may be operated up to a temperature of 104°F (40°C) at line pressure up to 5.0 bar (73 psig) for gas applications.

Effective Filtration Area:

0.8 m² (8.4 ft²) per 250 mm (10 inch module)

Food and Biological Safety:

Materials conform to the relevant requirements of 21CFR Part 177 and current USP Plastics Class VI – 121°C and ISO10993 equivalents. Cryptoclear PLUS is listed in the Water Fittings and Materials Directive Part II as a WRAS* Approved Product.

* WRAS – Water Regulations Advisory Scheme BS6920 Test of Effect on Water Quality.

Cleaning and Sterilization:

Fulflo II Crypto PES cartridges can be repeatedly steam sterilized in situ or autoclaved at up to 266°F (130°C). They can be sanitized with hot water at up to 194°F (90°C) and are compatible with a wide range of chemicals.

For detailed operational procedures and advice on cleaning and sterilization, please contact the Technical Support Group through your usual Parker contact.

Integrity Test Data:

All filters are flushed with purified water prior to shipment. They are integrity testable to the following limits.

PLeATeD DePTH FILTeRS

ENGINEERING YOUR SUCCESS.

POLY-MATE™ PM/PXD

Quality and economical filtration for food and beverage applications

Parker's Poly-Mate™ cartridges incorporate a unique combination of polypropylene meltblown and spunbonded media to provide high surface area, finish-free and non-fiber-releasing filtration. All-polypropylene construction maximizes chemical resistance to acids, bases, salts, and most organic solvents.

BENEFITS

- High efficiency rated for critical food and beverage applications (99% efficiency)
- High pleated surface area for extended service life, low pressure drop and high flow capacity
- Optional stainless steel O-ring adapter inserts provide added strength for in situ sterilization. Poly-Mate™ Xtra Duty cartridges are available with backwashable construction, reducing replacement maintenance and cartridge disposal costs
- Poly-Mate™ Xtra Duty (PXD) cartridge features glass-filled polypropylene core for high temperature and high pressure use with rigid outer cage supporting pleated media in backwash applications
- All materials of construction are FDA listed as acceptable for potable and edible liquid contact according to CFR Title 21.
- One-piece, continuous to 40 in length, integrally sealed, pleated filter media

APPLICATIONS

- Food & Beverage
- Deionized water
- R.O. membrane prefiltration
- Process water

GLASS-MATE™ PMG FILTER CARTRIDGE

Absolute and economical filtration with pleated micro fiberglass cartridges

Parker's Glass-Mate™ cartridges offer an economical choice for absolute-rated efficiency, high flow rate capability and long service life. A wide variety of construction components, end fittings and seal options make this product line ideal for prefiltration and point-of-use filtration for many food and beverage applications.

BENEFITS

- Absolute-rated media provides reliable removal efficiency
- Thermal bonding eliminates particle bypass
- Laminated media/support layer maximizes flow capacity and media utilization and minimizes media migration
- Variety of construction/seal options for increased compatibility
- End fitting options provide competitive housing retrofit capability
- All FDA listed components biosafe per USP Class V1-121°C Plastic Tests allows filtration of edible and potable liquids
- Optional stainless steel O-ring adapter inserts provide added stability for in situ sterilization
- High surface area yields high flow rate, low differential pressure
- Non-fiber-releasing media with minimal extractables provides high purity filtrate

APPLICATIONS

- Beer stabilization
- Wine clarification
- Food & Beverage
- R.O. prefiltration
- Coatings
- Sterile air
- Corn syrup

SPECIFICATIONS

Materials of Construction:

Filter Medium	Borosilicate microfiberglass with acrylic binder
Support/Drainage Layers	Spunbonded polyester; laminated on the downstream side

Recommended Operating Conditions:

Maximum Temperatures	
Glass Filled Polypropylene	200°F @ 35ΔP (93°C/2.4 bar)
Polyester	140°F @ 35ΔP (60°C/2.4 bar)
Stainless Steel	275°F @ 35ΔP (135°C/2.4 bar)
Changeout Differential Pressure	35 psi (2.4 bar)
Maximum Flow Rate	10 gpm per 10 in length (38 lpm/254 mm)
Design Flow Rate	2.5 gpm per 10 in length (9.5 lpm/254 mm)

Effective Filtration Area:

5 ft²/10 in (0.46 m²/254 mm) minimum

Maximum Differential Pressure:

Glass-Filled Polypropylene	90 psi @ 75°F (6.2 bar/24°C)
Polyester	70 psi @ 75°F (4.8 bar/24°C)

Biological Safety/Product Purity:

Meets USP XXIV Class VI safety requirements for plastics
All components FDA listed per CFR, Title 21
Non-fiber releasing per FDA

Sterilization/Sanitization:

Hot water ("F" construction): 180°F (82°C) for 30 minutes at maximum 15 psid (1 bar).
In-Line Steam/Autoclave ("F" construction with stainless steel sleeve) 60 minutes at 255°F (140°C) at 2 psid (0.14 bar) maximum pressure.

ABSO-MATE® PAB

Absolute, cost-effective filtration from all-polypropylene cartridges

Parker's Abso-Mate® cartridges provide the ultimate in economical filtration for even the most critical process fluids. The proprietary melt-blown media is rigidly controlled for reliable results time after time. Abso-Mate® cartridges are produced without adhesives that could contaminate fluids.

BENEFITS

- Absolute ratings for consistent and reliable performance (99.98%; $\beta = 5000$)
- Backwashable media reduces replacement maintenance and cartridge disposal costs.
- Abso-Mate® cartridges are non-fiber releasing and contain minimal extractables
- All materials of construction are FDA listed as acceptable for potable and edible liquid contact according to CFR Title 21
- One-piece construction eliminates bypass concerns on multi-length cartridges
- All-polypropylene construction provides wide compatibility with most chemicals, acids, bases and solvents

APPLICATIONS

- Membrane prefilter
- Food & beverage
- Water
- Waste water

SPECIFICATIONS

Materials of Construction:

Filter Media and Support Layers	Polypropylene
Bonding Polymer	None, completely fusion-sealed
Media Protection	Polypropylene cage
Support Core	Glass filled polypropylene

Maximum Recommended Operating Conditions:

Temperature	200°F (93°C)
Changeout ΔP	35 psi (2.4 bar)
ΔP @ 70°F (21°C)	90 psid (6 bar)
ΔP @ 200°F (93°C)	35 psid (2.4 bar)
Flow Rate	10 gpm (38 lpm) per 10 in length

Cartridge Dimensions:

Outside Diameter	2-1/2 in (63.5 mm)
Inside Diameter	DOE - 1-1/16 in (27 mm) SOE - 1 in (25.4 mm)

Effective Filtration Area:

Up to 7.2 ft²/10 in (0.7 m²/254 mm)

Biological Safety:

Meets USP XXI Class VI requirements for plastics
Nontoxic per WI-38 Human Cell Cytotoxicity Test

Sterilization Parameters:

Maximum 10 cycles @ 250°F (121°C)
for 15 minutes @ 15 psi (1.3 bar)
Hot water @ 180°F (82°C) for 30 minutes

ABSO-MATE® PAB

Absolute, cost-effective filtration from all-polypropylene cartridges

PARMAX™

Large-diameter high-flow elements

The best of pleated and large diameter technologies are combined in Parker's ParMax™ high flow filter cartridges. ParMax™ cartridges are available with polypropylene and microfiberglass media in absolute (99.98%) ratings from 1 to 90 micron. The unique layered construction provides excellent retention across a wide range of flux rates. One-six inch diameter cartridge can handle up to 500 gpm flow (60" length). The inside-to-outside flow allows for a high contaminant holding capacity. High flow and a long filter life make the ParMax™ an ideal choice for a wide variety of critical process applications.

BENEFITS

- Large diameter yields much higher flow rates compared to traditional 2.5" filters
- High flow capacity permits use of fewer elements and cuts capital expenditure
- Inside-out flow pattern ensures positive capture of contaminants
- Absolute retention ratings for critical filtration
- All materials listed as acceptable for potable and edible contact according to CFR Title 21
- Manufactured with strict quality control
- Parker is an ISO9001:2000 Certified Division

APPLICATIONS

- Process water
- Water
- Spirits
- Food and beverage

SPEC-C2062 Rev. A 9/07

POLYFLOW®

Pleated polypropylene absolute-rated depth cartridges with superior dirt-holding capacity

Polyflow®'s random fiber polypropylene depth media provides long on-stream life and high retention efficiencies. While many polypropylene depth media are nominally rated and cannot meet their actual claimed retention efficiency, Polyflow® is engineered to meet exacting performance claims.

Parker's innovative research team developed an exclusive calendering process that produces media with unsurpassed dirt-loading capacity. Before each lot of media is fabricated, the best calendering conditions are determined to ensure minimal lot-to-lot variability and peak product performance. The number of pleats for each filter rating has also been optimized to ensure maximum dirt-loading capacity and on-stream life.

Polyflow® is thermally bonded from 100% virgin polypropylene to ensure superior cleanliness and excellent chemical and thermal compatibility under harsh processing conditions.

BENEFITS

- Low extractables
- Absolute particle retention provides excellent protection for downstream filters
- Broad chemical compatibility allows use in most applications
- High flow rate, long service life reduces processing time

APPLICATIONS

- General water filtration
- Beverage/wine clarification
- RO/DI prefiltration
- Waste water

SPECIFICATIONS

Materials of Construction:

Depth media	Polypropylene
Support layers	Polypropylene
Structure	Polypropylene

Maximum Differential Pressure/Temperature:

Forward	80 psid (5.5 bar) @ 75°F (24°C)
Reverse	40 psid (2.8 bar) @ 75°F (24°C)
	15 psid (1.0 bar) @ 140°F (60°C)

Effective Filtration Area:

2.4 ft² (0.22 m²)	5" (130 mm) cartridge
4.9 ft² (0.46 m²)	10" (250 mm) cartridge

Filtration Ratings:

The 0.6 µm offers typical retention up to 99% efficiency.
1.2 µm, 2.5 µm, 5 µm, 10 µm, 20 µm, and 40 µm are up to 99.9% efficient at specified pore size

Filtration Cleanliness:

Cartridge extractables
NVR < 35 mg per 10 inch (250 mm) cartridge

Maximum Operating Temperature:

160°F (71°C)

Steam Sterilizable and Sanitizable:

Cartridges can be steam sterilized for multiple cycles at 266°F (130°C) or sanitized for at least ten 30-minute cycles with 176°F (80°C) water. They are compatible with most sanitizing agents.

POLYFLOW®

Pleated polypropylene absolute-rated depth cartridges with superior dirt-holding capacity

POLYFLOW®-G

All-polypropylene nominally rated depth cartridges for economical prefiltration

Polyflow®-G depth media has been developed for a wide variety of general process applications from fluid clarification to general prefiltration. Its high dirt-loading, random fiber polypropylene depth media provides consistent particle retention. Polyflow®-G is thermally bonded from 100% virgin polypropylene to ensure clean filtrates and excellent chemical and thermal compatibility in the most demanding processing conditions.

Polyflow®-G leads in overall reduction of filtration costs when compared to spunbonded, stringwound, and nominally rated pleated prefilter cartridges. Its longer filtration life reduces downtime due to fewer changeouts.

BENEFITS

- High flow rate and long service life reduce processing time
- Broad chemical compatibility allows use in most applications
- Thermally bonded construction minimizes extractables for cleaner filtrates

APPLICATIONS

- Liquid clarification
- General water filtration
- Beverage/wine clarification
- RO/DI prefiltration

SPECIFICATIONS

Materials of Construction:

Depth media	Polypropylene
Support layers	Polypropylene
Structure	Polypropylene

All components are thermally bonded to ensure integrity and reduce extractables

Maximum Differential Pressure/Temperature:

Forward	80 psid (5.5 bar) @ 75°F (24°C)
Reverse	40 psid (2.8 bar) @ 75°F (24°C)
	15 psid (1.0 bar) @ 140°F (60°C)

Nominal Filter Ratings:

0.2 µm, 0.5 µm, 1 µm, 3 µm, 10 µm, and 30 µm

Effective Filtration Area:

3.6 ft² (0.33 m²) per 10 inch (250 mm) cartridge

Cartridge Extractables:

NVR < 35 mg per 10 inch (250 mm) cartridge

Biological Safety:

All components meet USP specifications for Class VI-121°C Plastics criteria.

Maximum Operating Temperature:

160°F (71°C)

Bulk Packaging:

5'	12 per carton
10"	28 per carton
20"	12 per carton
30"	12 per carton
40"	9 per carton

POLYFLOW®-G

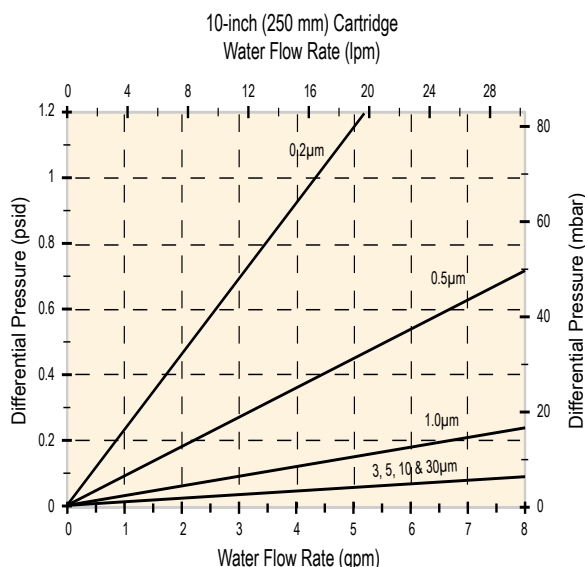

All-polypropylene nominally rated depth cartridges for economical prefiltration

PERFORMANCE ATTRIBUTES

Water in Flow Rates, Typical *

0.2 µm	4.2 gpm/psid (23.3 lpm/100 mbar)
0.5 µm	11.0 gpm/psid (60.4 lpm/100 mbar)
1.0 µm	33.0 gpm/psid (181.1 lpm/100 mbar)
3.0 µm	70.0 gpm/psid (384.2 lpm/100 mbar)
5.0 µm	70.0 gpm/psid (384.2 lpm/100 mbar)
10.0 µm	70.0 gpm/psid (384.2 lpm/100 mbar)
30.0 µm	70.0 gpm/psid (384.2 lpm/100 mbar)

* Per 10-inch (250 mm) cartridge equivalent and for fluids with viscosity of 1cP

POLYFLOW® MINI-CAPSULES

encapsulated filters with polypropylene matrix for small-volume prefiltration applications

Polyflow® Capsules feature a random fiber polypropylene depth matrix that provides superior retention efficiencies. In addition, the unique calendering process produces depth media with unsurpassed dirt-holding capacity that extends filter service life. Longer life leads to increased savings by requiring fewer filter Changeouts.

Polyflow® capsules are available in three sizes, enabling users to match the filters to actual batch sizes and minimize system hold-up volume. Cost savings result from the reduction of lost product, and by scaling the process properly to avoid excess filter capacity.

The encapsulated design maximizes efficiency by providing faster, easier Changeout without laborious cleaning procedures. Eliminating the need to open reusable housings for cartridge replacement minimizes the chance of introducing contamination into the process.

BENEFITS

- High flow rate reduces processing time
- Long service life minimizes Changeout frequency
- Broad chemical compatibility enables use in most applications
- High retention efficiency provides excellent protection for downstream filters
- Non-pyrogenic (per LAL test) for use in critical applications
- Custom ordering option allows different inlet/outlet fittings for specific needs

APPLICATIONS

- General water filtration
- Vent filtration

SPECIFICATIONS

Materials of Construction:

Depth media	Polypropylene
Support layers	Polypropylene
Structure	Polypropylene
Housing	Polypropylene

All components meet USP-XXIV Class VI-121°C criteria, and are thermally bonded to ensure integrity and reduce extractables

Maximum Differential Pressure/Temperature:

Forward	70 psid (4.8 bar) @ 75°F (24°C)
	35 psid (2.4 bar) @ 140°F (60°C)
	20 psid (1.4 bar) @ 167°F (75°C)
Reverse	30 psid (2.1 bar) @ 75°F (24°C)

Effective Filtration Areas:

See reverse side for details

Filtration Efficiency:

1.2 µm, 2.5 µm, 5.0 µm, and 10.0 µm are 99.9% efficient at the specified pore size. The 0.6 µm capsule offers typical retention efficiency of up to 99%

Cartridge Extractables:

NVR < 3 mg per 10 inch (250 mm) capsule

Autoclavable and Sanitizable:

Can be autoclaved for up to 25 cycles at 275°F (135°C), or sanitized using most common cleaning agents

POLYFLOW® MINI-CARTRIDGES

Small-volume filters with polypropylene depth matrix for prefiltration applications

Polyflow® mini-cartridges feature a random fiber polypropylene depth matrix that provides superior retention efficiencies. In addition, the unique calendering process produces depth media with unsurpassed dirt-holding capacity extending service life. Longer product life brings to increased savings by requiring fewer filter Changeouts.

Polyflow® mini-cartridges match popular batch sizes and minimize hold-up volume. Cost savings result from reduction of lost product and by scaling the process properly to avoid wasting excess filter capacity.

BENEFITS

- High flow rate reduces processing time
- Long service life minimizes Changeout frequency
- Broad chemical compatibility enables use in a range of applications
- High retention efficiency provides excellent protection for downstream filters
- Non-pyrogenic (per LAL test) for use in critical applications
- End fitting provides a secure O-ring seal (-116) available in a number of materials
- Low hold-up volume

APPLICATIONS

- Small scale prefiltration
- General water filtration
- Vent filtration

wound FILTeRS

ENGINEERING YOUR SUCCESS.

FULFLO® SWC FILTER CARTRIDGES

economical filtration solutions with string-wound depth cartridges

Parker's SWC Filter cartridge offers a wide range of fibers and core materials. Roving is wound onto a center core for strength. The diagonal pattern of the media forms a tight, interlocking weave. Parker has one of the world's largest manufacturing plants for wound cartridges, offering superior quality with technical, engineering and marketing support.

BENEFITS

- Multiple length cartridges minimize changeout time, eliminate spacers and are available to fit competitive filter vessels
- Cotton and polypropylene materials are FDA listed as acceptable for potable and edible liquid contact according to CFR Title 21
- Continuous-strand roving geometry provides performance consistency
- Extended center core option eliminates the need for cartridge guides in competitive and Fulflo multi-cartridge vessels
- One-piece extended length center cores are available in tinned steel, 316 stainless steel and 304 stainless steel
- A special snap-in extender is available for polypropylene cores
- FDA grade polypropylene (DOE only) certified to ANSI/NSF61 standard for contact with drinking water components

APPLICATIONS

- Water
- Potable liquids
- Prefilter for R.O. membranes
- Vegetable oils

HONEYCOMB™ FILTER CARTRIDGES

Multi-purpose filtration solutions

Parker has been a leader in filter media innovation and performance since we invented the Honeycomb™ Filter tube over 65 years ago. Parker has the world's largest manufacturing capacity for wound cartridges, offering superior quality with technical, engineering and marketing support.

Effective removal ratings at nominal 90% efficiency from 0.5 μm to 150 μm range.

BENEFITS

- Multiple-length cartridges minimize Changeout time, eliminate spacers and are available to fit competitive filter vessels
- FDA grade polypropylene (DOE only) cartridges certified to ANSI/NSF61 standard for contact with drinking water components
- Continuous strand-winding geometry provides performance consistency
- One-piece metal extended center core option eliminates need for cartridge guides in all competitive and Fulflo® multi-cartridge vessels
- A special snap-in extender is available for polypropylene cores
- Cotton, rayon, polypropylene, nylon and polyester materials are FDA listed as acceptable for potable and edible liquid contact according to CFR Title 21
- Various O-ring and end cap options are available

APPLICATIONS

- Photo solutions
- Potable liquids
- Vegetable oils
- Amines
- Organic acids & solvents
- Prefilter for membranes
- Water

3 in to 50-in lengths

Wound Depth Cartridge Design and Function

Wound cartridges provide true depth filtration utilizing thousands of tapered filtering passages of controlled size and shape. Each layer of roving contributes to true depth filtration by trapping its share of particles. Wound cartridges offer a gradual pressure increase during cartridge life versus surface-type media that have an abrupt flow cutoff when loaded. In addition, the irregular outer layer reduces surface blinding, assuring longer cartridge life and full cartridge dirt-holding capacity utilization.

HONEYCOMB™ ULTRAFINE CARTRIDGES

Multi-purpose filtration solutions with Parker's wound depth filter cartridges

Parker has been a leader in filter media innovation and performance since we first invented the Honeycomb™ Filter tube over 65 years ago. Parker has the world's largest manufacturing capacity for wound cartridges, offering superior quality with technical, engineering and marketing support.

Effective removal ratings at nominal 90% efficiency at 0.5 μm .

BENEFITS

- A broad range of media provides excellent compatibility with a variety of organic solvents, animal, petroleum and vegetable oils
- Optional core covers and end treatments assure fiber migration control
- Multiple-length cartridges minimize Changeout time, eliminate spacers, and are available to fit competitive filter vessels
- FDA grade polypropylene (DOE only) cartridges certified to ANSI/NSF61 standard for contact with drinking water
- Continuous strand-winding geometry provides performance consistency
- One-piece metal extended center core option eliminates need for cartridge guides in all competitive and Fulflo® multicartridge vessels
- A special snap-in extender is available for polypropylene cores
- Cotton, polypropylene materials are FDA listed as acceptable for potable and edible liquid contact according to CFR Title 21
- Various O-ring and end cap options are available

APPLICATIONS

- Prefilter for membranes
- Rinse water in semiconductor manufacturing
- Fine filtration for ultrasonic parts, washer solvents and other high-purity solvents
- Prefilter for industrial reverse osmosis equipment

1 in ID x 2-7/16 OD
3 in to 50-in lengths

Wound Depth Cartridge Design and Function

Wound cartridges provide true depth filtration utilizing thousands of tapered filtering passages of controlled size and shape. Each layer of roving contributes to true depth filtration by trapping its share of particles. Wound cartridges offer a gradual pressure increase during cartridge life versus surface-type media that have an abrupt flow cutoff when loaded. In addition, the irregular outer layer reduces surface blinding, assuring both longer cartridge life and full cartridge dirt-holding capacity utilization.

Ultrafine Wound Depth Cartridges for Critical Filtration Applications

Ultrafine cartridges are a unique member of the Honeycomb™ wound depth cartridge family. They are specifically designed for critical filtration applications in the 0.5 μm range. When absolute 0.5 μm filtration is required, the nominal ultrafine cartridge can be used as a prefilter, significantly extending membrane life. Ultrafine cartridges remove 90% of particles larger than 0.5 μm in size. This type of filtration provides excellent protection for equipment or processes that must be protected from fine particles.

MEGABOND PLUS™

Fixed-pore structure depth cartridges with high dirt-holding capacity & absolute rated filtration efficiency

Parker's MegaBond Plus™ are absolute-rated depth cartridges. Using a new, innovative manufacturing process, the MBP has higher Dirt-holding capacities offering long service life and virtually no contaminant migration. The MBP has a fixed core inner structure of thermally-bonded, continuous microfine polypropylene fibers. The outer layer fixed pore structure has been modified to maximize the graded density surface area and enhance dirt-holding capacity.

BENEFITS

- Fixed pore structure provides absolute-rated filtration, consistent production yields and absolute particle retention
- Microfine, thermally-bonded fiber construction provides superior filtration and often eliminates the need for circulation to achieve product clarity
- Non-fiber-releasing, continuous fiber matrix prevents media migration and ensures consistent production yields and overall quality filtration performance
- No surfactants or binders are present to interrupt product quality or cause foaming
- DOE cartridges have polyolefin gaskets thermally bonded to both ends, eliminating fluid bypass between the cartridge and the vessel seal
- Superior inter-layer bonding eliminates contaminant unloading and channeling
- Unique outer graded density structure increases dirt-holding capacity
- Polypropylene fiber provides broad chemical compatibility for a variety of applications
- All materials of construction are FDA listed as acceptable for potable and edible liquid contact according to CFR Title 21
- Pore size differentiation is achieved using fibers of differing diameters and maintaining uniform density throughout the cartridge
- Pore sizes do not change as ΔP increases during service, providing consistent particle retention

APPLICATIONS

- Membrane prefiltration
- DI water
- Food & Beverages
- Drinking water

SPEC-C-1301-FB Rev. A 9/07

DURABOND™

economical filtration with high-strength thermally-bonded depth cartridges

Parker's DuraBond™ cartridges are the most economical high-strength filter cartridges available. Featuring an integral rigid, thermally-bonded construction, the DuraBond™ provides consistent filtration for a wide variety of fluids. Fulflo Durabond cartridges are available in nominal ratings (90%) of 1, 3, 5, 10, 25, 50, 75 and 100 microns.

BENEFITS

- Fixed pore structure provides efficiency, integrity and optimum particle retention
- Thermally-bonded bicomponent fiber matrix provides rigid, dimensionally stable construction without fiber migration
- Rigid construction eliminates contaminant unloading and channeling
- Corrugated porous surface maximizes dirt-holding capacity
- Silicone-free construction will not change coating properties
- FDA grade polypropylene (DOE only) certified to ANSI/NSF61 standard for contact with drinking water
- Polyolefin construction provides broad chemical compatibility for a variety of applications
- All materials of construction are FDA listed as acceptable for potable and edible liquid contact according to CFR Title 21
- DuraBond™ cartridges can be easily disposed by shredding, incinerating or crushing
- Double-open-end style is self-sealing without separate gasket material

APPLICATIONS

- Potable water
- DI water
- R.O. prefiltration
- Membrane prefiltration
- Food & beverages

AVASAN™ FILTER CARTRIDGES

High purity melt-blown depth cartridges

Avasan™ (AVS) cartridges are manufactured by a proprietary melt-blown manufacturing process using a specially formulated polypropylene. This formulation provides a uniquely graded-density filter cartridge designed for high purity applications. The fiber matrix of the cartridge has been engineered to provide structural integrity throughout the filter's long service life. The finish-free construction provides optimum fluid purity and eliminates foaming. Avasan's broad fluid compatibility and graded density pore matrix make it the economical filter choice for high clarity requirements.

BENEFITS

- Graded density construction provides consistent filtrate quality and excellent particle retention
- Continuous bonding of fibers throughout the filter matrix ensures non-fiber-releasing construction
- Superior inter-layer bonding provides true three-dimensional filtration and a construction that does not compress with increasing pressure
- All-polypropylene construction
- Finish-free construction provides optimum fluid purity and eliminates foaming
- All materials are biosafe in accordance with USP Class VI-121°C Plastic Test
- All materials listed as acceptable for potable and edible according to CFR Title 21
- Parker Division is ISO9000:2000 Certified

APPLICATIONS

- DI water
- Food & beverages
- R.O. prefiltration
- Potable water

MeTALLIC FILTeRS

ENGINEERING YOUR SUCCESS.

FULFLO® METALLIC FILTER CARTRIDGES

optimize process filtration with high-integrity metallic cartridges

Parker's Fulflo® stainless steel cartridges provide the optimum filtration solution for liquids and gases in high temperature and high flow rate applications.

Available in cylindrical or pleated designs, cleanable stainless steel cartridges are the logical choice when natural and synthetic media cartridges cannot meet aggressive process conditions.

Fulflo® reusable 304 and 316 stainless steel cartridges offer versatility of choice with fourteen nominal removal ratings, six standard lengths and a variety of end configurations and seal materials.

BENEFITS

- Dimensional integrity of stainless steel media accommodates high flow rate and high temperature systems
- Cartridges can be cleaned and reused
- Variety of seal configurations allow retrofit in many filter vessel designs
- Welded and crimped construction eliminates the need for adhesives which can be a contaminant source and limit temperature range
- Pleated surface maximizes filtration area for longer service life
- Plain (cylindrical) surface provides ease of cleaning
- Optional perforated stainless steel pleat protective sleeves minimize handling damage
- Meets FDA guidelines for use with potable liquids

APPLICATIONS

- Process steam
- Viscous fluids
- High temperature processes

SPECIFICATIONS

Materials of Construction:

Filter	Medium stainless steel wire cloth
Structural Components	100% stainless steel
Construction Method	Welded and crimped (no adhesives)

Meets FDA guidelines with optional seal materials ("F" Code)

Maximum Recommended Operating Conditions:

Temperature	
1500°F (816°C)	NPTF and NPTM styles
500°F (260°C)	Any cartridge style with PTFE grommet
400°F (204°C)	Any cartridge style with Viton® or PFA encapsulated Viton® seal material
300°F (149°C)	Any cartridge style with EPDM seal material
250°F (121°C)	Any cartridge style with Buna N seal material
Differential Pressure	
Standard core	60 psi (4.1 bar)
High pressure core	300 psi (20.7 bar)
Flow Rate	10 gpm (38 lpm) per 10-inch cartridge
Changeout ΔP	35 psi (2.4 bar)

Effective Filtration Area:

Cylindrical	0.5 ft²/10-in length (465 cm²/254 mm)
Pleated	1.7 ft²/10-in length (1580 cm²/254 mm)

BAG FILTeRS

ENGINEERING YOUR SUCCESS.

FULFLO® FILTER BAGS

Fulfo® Filter Bags provide high quality and consistent filtration performance

Fulflo® Filter Bags are ideal for virtually any process filtration application requiring the removal of solids. Parker's Fulflo® Filter Bags are manufactured and tested under the strictest quality control standards to assure consistent performance. Parker's Fulflo® Filter Bags perform at high flow rates and viscosities to 10,000 cps or higher.

BENEFITS

- Standard filter bags fit Fulfo® vessels and most major competitive models
- The "C" Style Fulflo® bag features a polypropylene Quik-Seal™ ring which effectively seals the bag into standard Parker bag vessels
- The "G" Style Fulflo® bag features a carbon steel snap ring for positive sealing in competitive vessels
- Fulflo® Quik-Seal™ option is available for all "G" style Fulflo® Filter Bag media
- Felt bags come standard with glazed surface treatment to effectively control migration of fibers into the filtered product
- Polypropylene felt (P) bags are suitable for incidental food contact per CFR Title 21

APPLICATIONS

- Beverages
- Prefilters for finer cartridges
- Edible oils
- Water

SPECIFICATIONS

Materials of Construction:

316 stainless steel

Maximum Recommended Operating Conditions:

Temperature	
Polyester	275°F (136°C)
Polypropylene	200°F (94°C)
Monofilament Nylon Mesh	275°F (136°C)
Multifilament Polyester Mesh	275°F (136°C)

Effective Removal Ratings:

0.5 µm to 800 µm	
Flow Rate	(Per single length)
Standard Bag	80 gpm (303 lpm)
Changeout ΔP	35 psi (2.4 bar)
Pressure	70 psid (4.8 bar)

Bag Size:

C1:	7.5" X 17.5"
C2:	7.5" X 31.5"
G1:	7" X 17.5"
G2:	7" X 31.5"

Bag Media Selection:

Felt: Synthetic needled fabric offers cost-effective depth filtration. Particle retention ratings from 1 µm to 200 µm

Monofilament Mesh: Single strand nylon with retention ratings from 100 µm to 600 µm

Glazed: In polypropylene or polyester felts, the surface fibers are melt bonded to one another, reducing the possibility of fiber migration

Multifilament Mesh: Strong fabric woven from twisted strands. Particle retention ratings from 150 µm to 800 µm

Seal Options

C	Plastic Quik-Seal™ Ring (polypropylene for P felt and polyester for PE felt)
G	Steel Snap Ring

FULFLO® FILTER BAGS

Fulfo® Filter Bags provide high quality and consistent filtration performance

PERFORMANCE ATTRIBUTES

Standard Bag Flow Factors

Rating (µm)	Flow Factor
1	0.00083
3	0.00059
5	0.00044
10	0.00029
25	0.00017
50	0.00013
75	0.00008
100	0.00007

Flow Rate and Pressure Drop Formulae:

$$\text{Flow Rate (gpm)} = \frac{\text{Clean } \Delta P \times \text{Length Factor}}{\text{Viscosity} \times \text{Flow Factor}}$$

$$\text{Clean } \Delta P = \frac{\text{FlowRate} \times \text{Viscosity} \times \text{Flow Factor}}{\text{Length Factor}}$$

Notes:

1. **Clean ΔP** is PSI differential at start.
2. Viscosity is centistokes. Use Conversion Tables for other units.
3. Flow Factor is ΔP/GPM at 1cks for 10 inch (or single).
4. Length Factors convert flow or ΔP from 10 inch (single length) to required cartridge length.

TECHNICAL SUPPORT AND PRODUCT INFORMATION

Parker provides our customers with unsurpassed product consistency and cost efficiency. Our experienced professionals can help you select the right solution for your application. Orders can be emailed directly to PAFsales@parker.com. For additional information contact your local distributor. Information on product specifications, applications and chemical compatibility can be found on our web site at www.parker.com or through the Oxnard office.

Parker designs and manufactures an extensive line of innovative solutions for specific applications in the Microelectronics, Biopharmaceutical, Food and Beverage, Coatings and Inks, Process and Chemical industries.

XLH FILTER BAGS

XLH high efficiency filter bags provide high quality filtration performance

XLH Filter Bags are ideal for virtually any process filtration application requiring the removal of solids. Parker's XLH filter bags are manufactured and tested under the strictest quality control standards to assure consistent performance. Parker's XLH filter bags perform at high flow rates and viscosities to 10,000 cps or higher.

XLH high efficiency filter bags perform at efficiencies similar to depth cartridges. XLH bags are available in 0.5 μm , 1 μm , 2.5 μm , 10 μm and 25 μm particle retention ratings.

BENEFITS

- Parker's XLH all-polypropylene high efficiency filter bags provide twice the dirt-holding capacity at a lower cost than many competitive bags and cartridges of the same micrometer rating
- XLH bags require less frequent Changeout, less storage and disposal space, and are easy to install and remove
- Each bag is incinerable (with Quik-Seal™ option), reducing filter disposal costs
- All materials of construction are FDA listed as acceptable for potable and edible liquid contact according to CFR Title 21

APPLICATIONS

- Water
- Beverages
- Prefilters for finer cartridges
- Edible oils

SPECIFICATIONS

Materials of Construction:

Microfiber	FDA grade polypropylene microfiber used in the XLH bag series assures high efficiency performance and is oil absorbent

FILTeR veSSeLS

ENGINEERING YOUR SUCCESS.

FULFLO® “LT” SERIES

Fulfo® polymeric vessels for water filtration

Parker Fulflo® LT Series Polymeric Vessels are an ideal economical choice for low flow industrial and potable water applications. Standard and large diameter vessels accommodate 2-1/2 and 4-1/2 inch O.D. double-open-end Fulflo cartridges and meet FDA requirements for use with potable fluids. Both 10-in and 20-in vessels, with or without pressure relief vent, are available. Installation wrenches and brackets are optional.

BENEFITS

- Fulflo® polymeric vessels are available in two diameters and lengths, with or without relief vent
- The all polymeric, corrosion-resistant LT series vessels are economical alternatives to stainless steel vessels when high temperature and high pressure are not specified
- All models are made of materials that meet FDA requirements
- The LTG model vessels provide both 1 in and 1-1/2 in NPT connection in same head
- Positive head-to-shell "stop" prevents over tightening
- Unique O-ring design ensures effective sealing by positive tangential contact and eliminates accidental misplacement
- LT model vessels are ideal for Fulflo® bonded, pleated and wound cartridges, as well as activated carbon core models MMCT-10, MC10-2, MC20-2 and MC30-2
- LTG model vessels are ideal for Fulflo® TruBind® 400 series cartridges and 4-1/2 in O.D. wound cartridges in double-open-end style
- Optional installation wrenches accommodate faster cartridge Changeout
- Mounting brackets are available for pipe and wall installation
- LT series vessels are tested to industry standards of Water Quality Association for burst pressure, seal integrity, and fatigue resistance

APPLICATIONS

- | | |
|-----------------|---|
| • Potable water | • Post oil/water separator polishing |
| • Beverages | • Leisure/commercial shipping bilge water |
| • Bottled water | • Industrial discharge water |
| • DI water | • Compressor condensate |
| • Food products | • Alkaline parts washing |
| • Process water | |

SPECIFICATIONS

Materials of Construction:

White talc-reinforced polypropylene head with clear styrene Acrylonitrile (SAN) shell.

Recommended Operating Conditions:

Maximum operating temperature: 125°F (52°C) @

100 psi (6.9 bar)

Maximum operating pressure: LT:150 psi (10.3 bar) @ 75OF (22OC)

LTG: 125 psi. (8.6 bar) @75OF (22OC)

Maximum Recommended Flow Rate:

ADVANTAGE™ SANITARY VESSELS

Achieve sterile filtration of aqueous solutions, air and gas

Parker's Advantage sanitary electropolished filter vessels for sanitary applications provide the ultimate in vessel performance and durability for the most demanding, high purity liquid filtration requirements.

BENEFITS

- 316L stainless steel provides lasting durability, thermal, mechanical and chemical compatibility
- Exteriors are electropolished to 32 Ra for fast and easy surface cleaning
- Interiors are electropolished to a maximum of 25 Ra for fine, mirror-like finish which minimizes the risk of contamination, improves cleanability and enhances corrosion resistance
- Sanitary vents and drains facilitate sampling, integrity testing, venting, and safe and easy draining
- Machined filter cup ensures reduced holdup volume and proper O-ring seal for 222 or 226 single-open-end element seals
- Cast clamp closure for 1 round and swing bolt closure for multiple round vessels
- T-Style designs provide easy cartridge replacement without disconnecting lines
- Optional sanitary drain and vent valves enable complete drainage of liquids after filtration and simplify filter removal
- Tricomp flange inlets and outlets allow easy dismantling of parts for fast and simple cleaning
- Standard design is ASME code without stamp. Stamp is optional.

APPLICATIONS

- | | |
|-------------------|----------------------------|
| • Pharmaceutical | • Laboratory |
| • Veterinary | • Medical & medical device |
| • Food & beverage | • Biotechnology |

SPECIFICATIONS

Design Features:

- All vessels have T-style inlet and outlet connection.
- Multiple element vessels have legs.
- Single element vessel is supported by piping only.
- Single element vessel design is non-code.
- Multiple element design vessels are ASME code design without stamp.
- Code stamp is optional.

Operating Conditions:

Multiple element design pressure and temperature
150 psig (10.3 bar) at 200°F (93°C) and full vacuum

Hydrostatic Testing Conditions 225 psig (15.5 bar)

Single element design pressure and temperature

250 psi (liquid), 125°F psi (gas) at 100°F (38°C)
